Silence Booth/ Office Pod (Prefabricated)

2025.

Vistra TechnoProducts LLP

Company Profile

Vistra TechnoProducts LLP is an emerging solutions provider specializing in **modular acoustic pods, office privacy booths, and sound-insulated workspace environments**, designed for modern workplaces. Our mission is to enhance productivity and privacy by delivering intelligently designed acoustic solutions that integrate seamlessly into contemporary office environments.

With a strong emphasis on quiet workspaces in open office layouts, Vistra TechnoProducts focuses on providing high-performance acoustic pods engineered to reduce noise, improve concentration, and create dedicated spaces for calls, meetings, and focused work. Our products, combine advanced sound insulation materials, ergonomic design, and modern aesthetics, ensuring that organizations can maintain both functional efficiency and workplace comfort.

Applications

- Corporate offices
- Co-working spaces
- Technology companies
- Educational institutions
- Healthcare facilities
- Media and creative studios

Smoking Pods

Types of Pods :

1. Focus Pod – single person work pod
2. Meeting Pod – 2-4 person meetings
3. Conference Pod – 4-6 person meetings
4. Video Call Pod – optimized for virtual meetings
5. Smoking Pod – ventilated pod for smoking areas
6. Custom Pods – tailored to space or client requirements

Our Solutions

Phone Booth Pods

Compact acoustic booths designed for private calls and video meetings in open office environments.

Single-Person Focus Pods

Quiet workspace pods that provide distraction-free environments for focused work.

Meeting Pods

Larger acoustic booths designed for small team discussions, collaboration, and virtual meetings.

Customized Acoustic Solutions

Tailored pod configurations designed to meet the spatial and functional requirements of specific workspaces.

— *Creating Quiet Spaces for Focus, Collaboration, and Productivity* —

Why an office needs Office Pod?

The main goal is to provide organizations with a complete and comprehensive solution that not only effectively addresses the common acoustic challenges and privacy issues faced by modern office spaces, but also prioritizes user friendliness and environmental sustainability. We understand the key role that a harmonious and favorable work environment plays in improving employee productivity, overall well-being, and successful collaboration. With this in mind, we have carefully created a shelter that helps with concentration,

Minimize interference to the greatest extent possible and provide individuals with a sense of privacy when needed. In addition, we are committed to environmental practices, ensuring that our soundproof cabin is constructed using eco-friendly materials and incorporates energy-saving features. By choosing a silent cabin, we can adopt a holistic approach to workspace design, which not only improves performance and collaboration, but also contributes to a greener future.

03 Improve Concentration

The sound insulation performance of the silent cabin effectively shields external noise, allowing employees to concentrate without interference. The enhanced focus of the silent cabin will ultimately improve productivity and work quality.

01 Enhance Privacy

The silent cabin provides individuals with a dedicated space for confidential conversations. This is particularly important in industries such as finance, healthcare, and legal services, as these industries must protect sensitive data.

04 Versatility

The silent cabin has multiple sizes to choose from, carefully planned to fit most office spaces. Modular design makes it easy to customize, build, and expand. In addition, the casters are easy to reposition, providing flexibility to adapt to constantly changing needs.

06 Becoming An Asset

All the features of the silent cabin make it a compliant asset, rather than a company expense. Reconfigurable properties allow businesses to adjust their workspace at the lowest cost, or resell booths for liquidity, providing long-term value, and contributing to a dynamic and efficient office environment.

02 Enhance Communication

The materials used in the construction of the soundproof cabin effectively isolate environmental noise and reduce echoes and reverberations that may interfere with audio quality. This improves sound quality and ensures that phone and video conferences are easier to understand and more efficient, enabling effective communication and collaboration even in busy office environments.

05 Sustainability

The soundproof cabin not only uses certified materials, but also adopts modular design and manufacturing to avoid the drawbacks of traditional methods of building rooms, such as "wet operations" that generate waste and stains, as well as heavy electric tools that produce loud noise. This makes it the best way to upgrade an in use office.

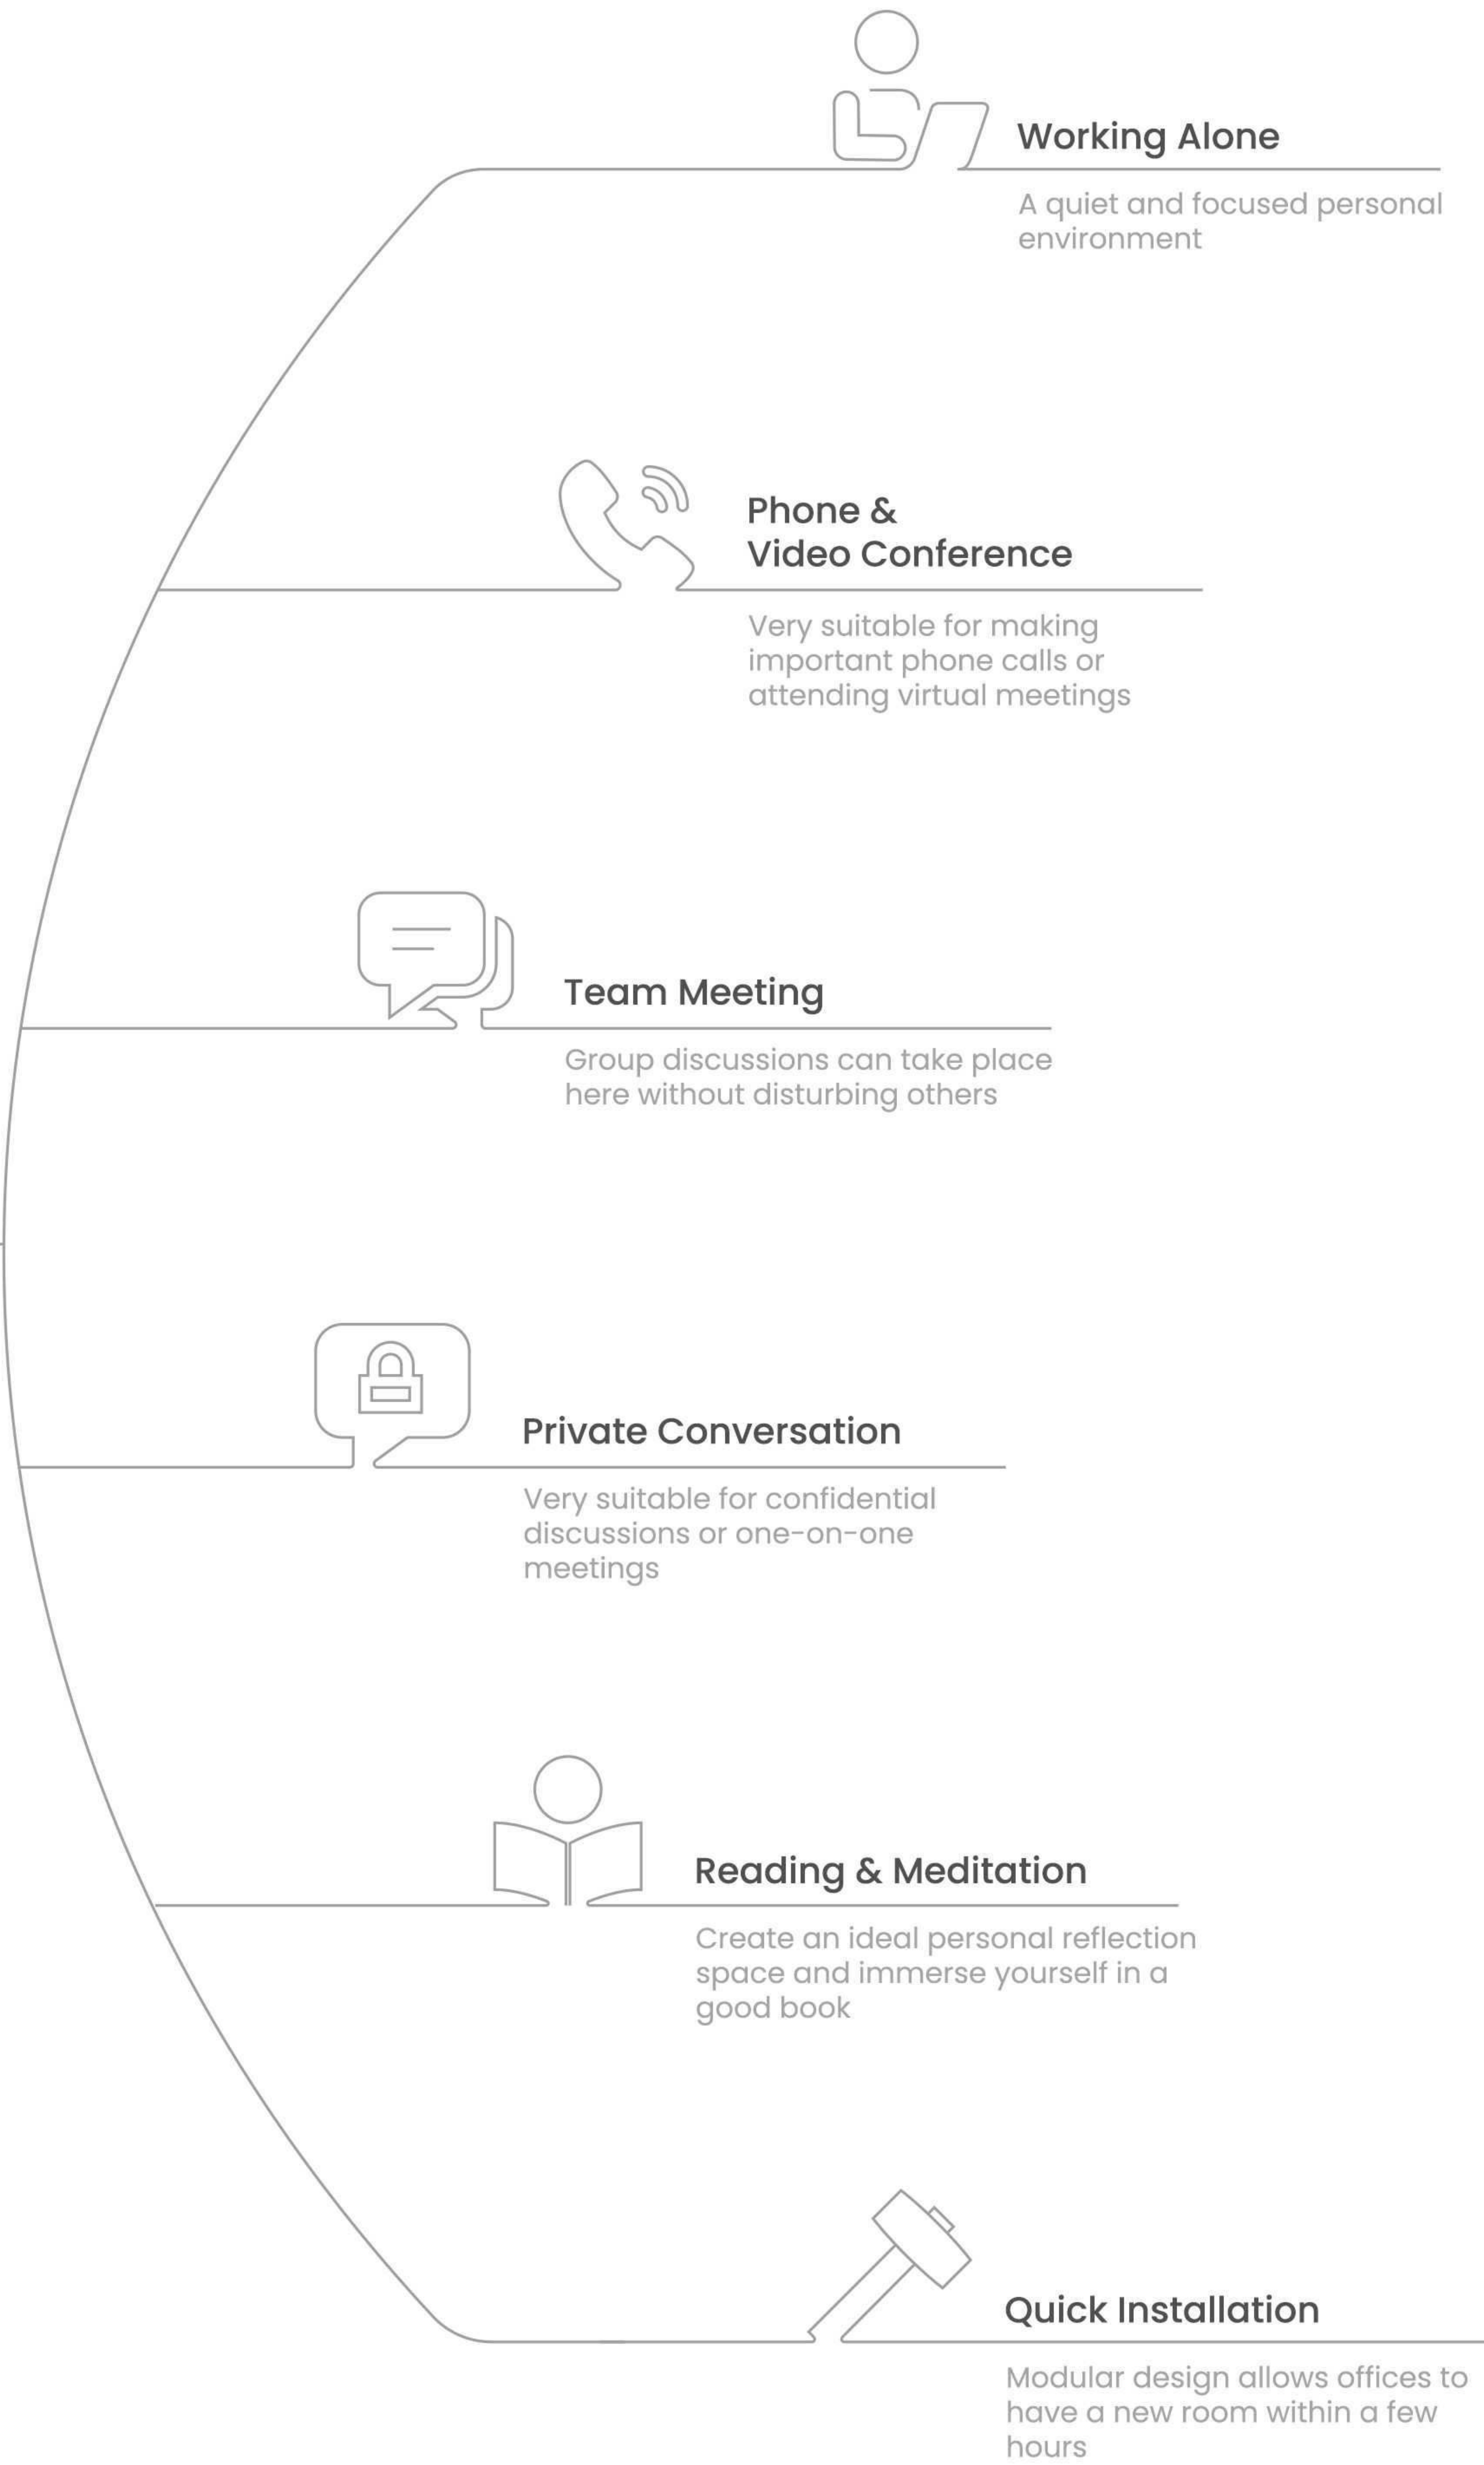

Why an office needs Office Pod?

Silent cabin is a thoughtfully designed space that fully considers the diverse work modes and activities of employees throughout the day. It not only provides excellent sound insulation, but also offers various convenient facilities and equipment that are within reach, making your workday seamless and efficient.

Adjustable lighting, ventilation, and power supply, our silent cabin improves work efficiency, promotes collaboration, and enhances personal efficiency. Experience the differences of a silent cabin and discover a whole new level of productivity and comfort.

Details

Not just sound insulation

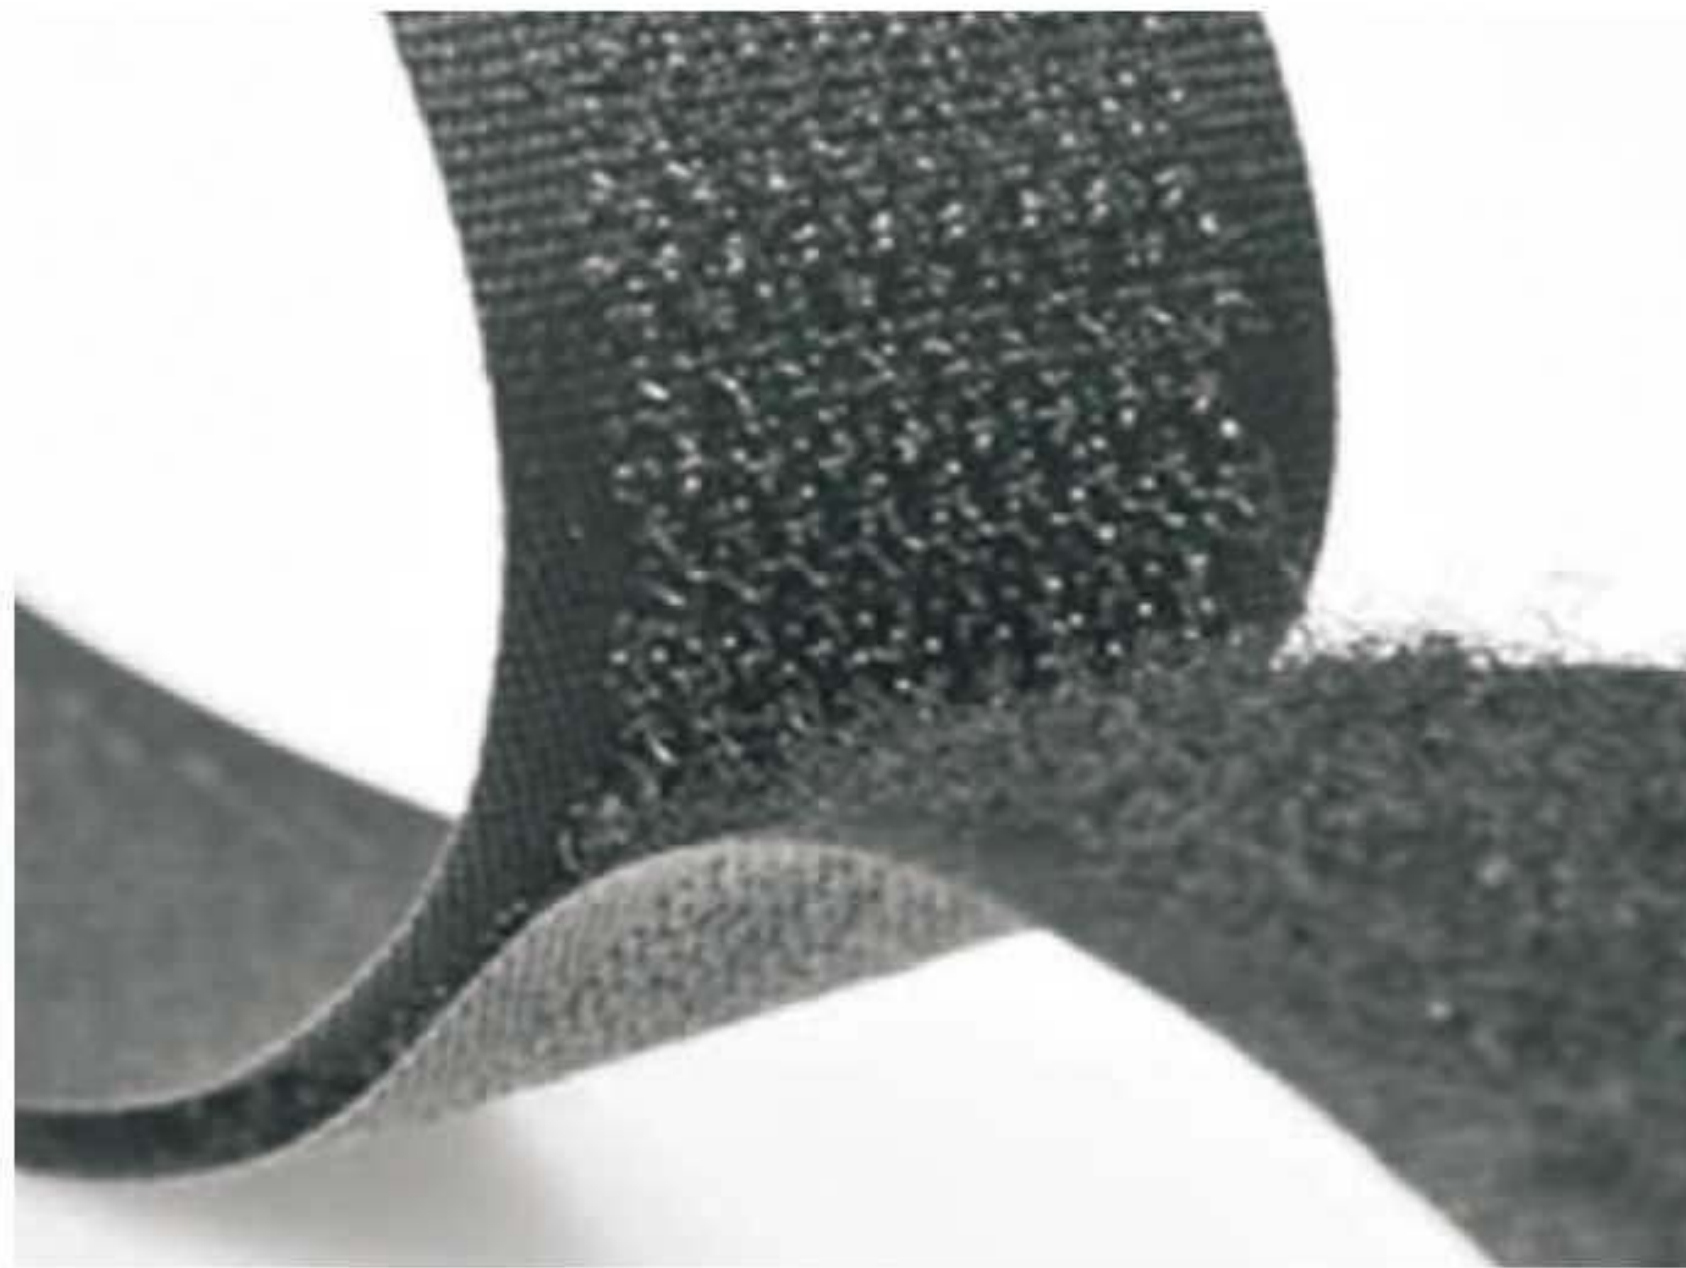

Alloy Door Lock

Adopting high-quality zinc alloy lock, the lock core material is copper lock core

Modular Aluminum Profile Frame

Balancing flexibility, stability, economy, and environmental friendliness

Velcro Strip

Stable and fast installation facilitates later recycling

LED Lights

4000k natural light color temperature LED central lighting system

Modular Power Socket

Supports USB Type A/C, with optional multiple types of sockets and gigabit modules

Compact Laminated Table

Compact laminated board, scratch resistant and chemically resistant

We understand that a well-designed soundproof cabin can not only attract attention, but also promote participation and interaction. Therefore, we attach great importance to creating silent cabin products that not only attract attention but also provide excellent user experience. We paid meticulous attention during the production process.

In terms of details, we carefully design every aspect of the silent cabin to ensure optimal usability. Our goal is to provide all users with a seamless and enjoyable experience, allowing them to easily enjoy this soundproof shelter.

Air Ventilation

It feels like being in an office

01

Balanced Air Pressure

Most silent cabin products are ventilated through positive air pressure, which can cause ear discomfort. In the silent cabin, fans are used for both air intake and exhaust to maintain a constant external air pressure, which helps to avoid "airplane ear" (ear pressure trauma).

02

Centrifugal Fan

When the cabin quiets down, the noise of the fan becomes noticeable. We use centrifugal fans for air intake to achieve smoother airflow at lower speeds, resulting in less noise.

03

Auto Refresh

Every 30 minutes, the fan will automatically turn on the ventilation mode for 5 minutes, which helps to keep the pipes and cabin dry, keep the scent fresh, and prepare for the next user.

04

Acoustic Air Duct

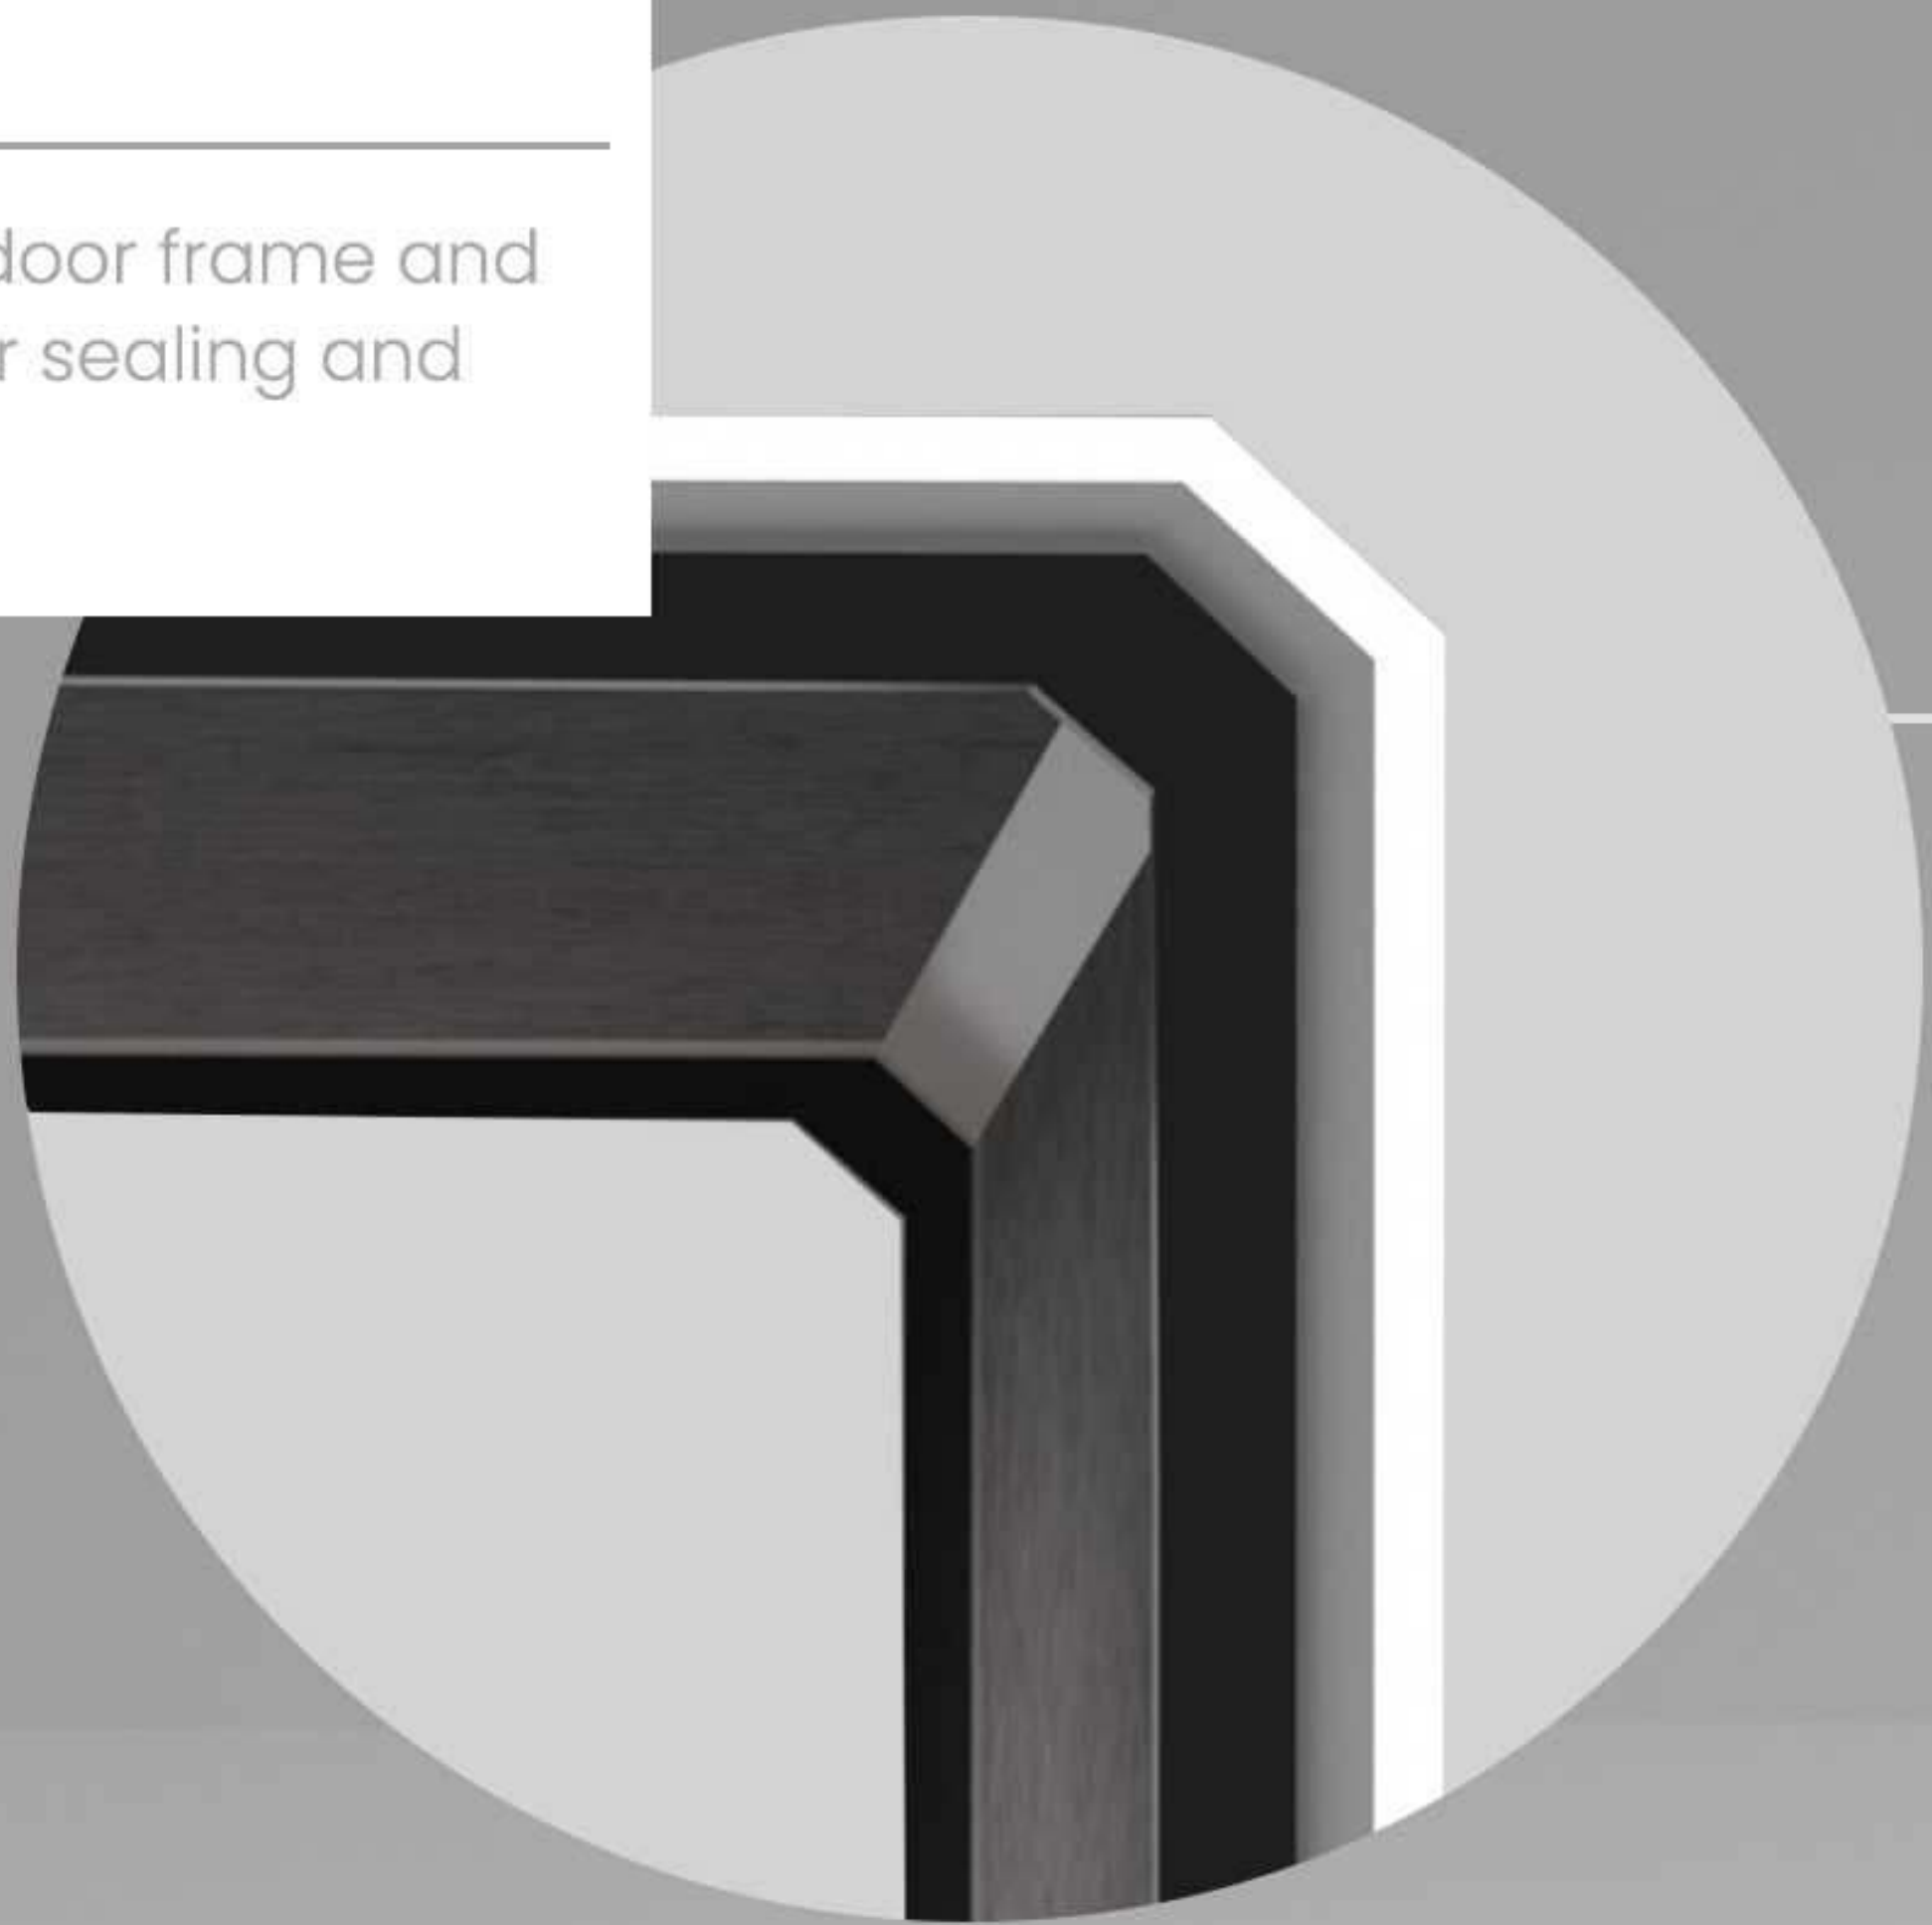

Inspired by acoustic echoes, we have applied sound-absorbing materials in pipelines to minimize sound exchange between the inside and outside.

Speech Noise
Reduction Level (Ds.) 30-35dB (A)

01

Tightly Sealed

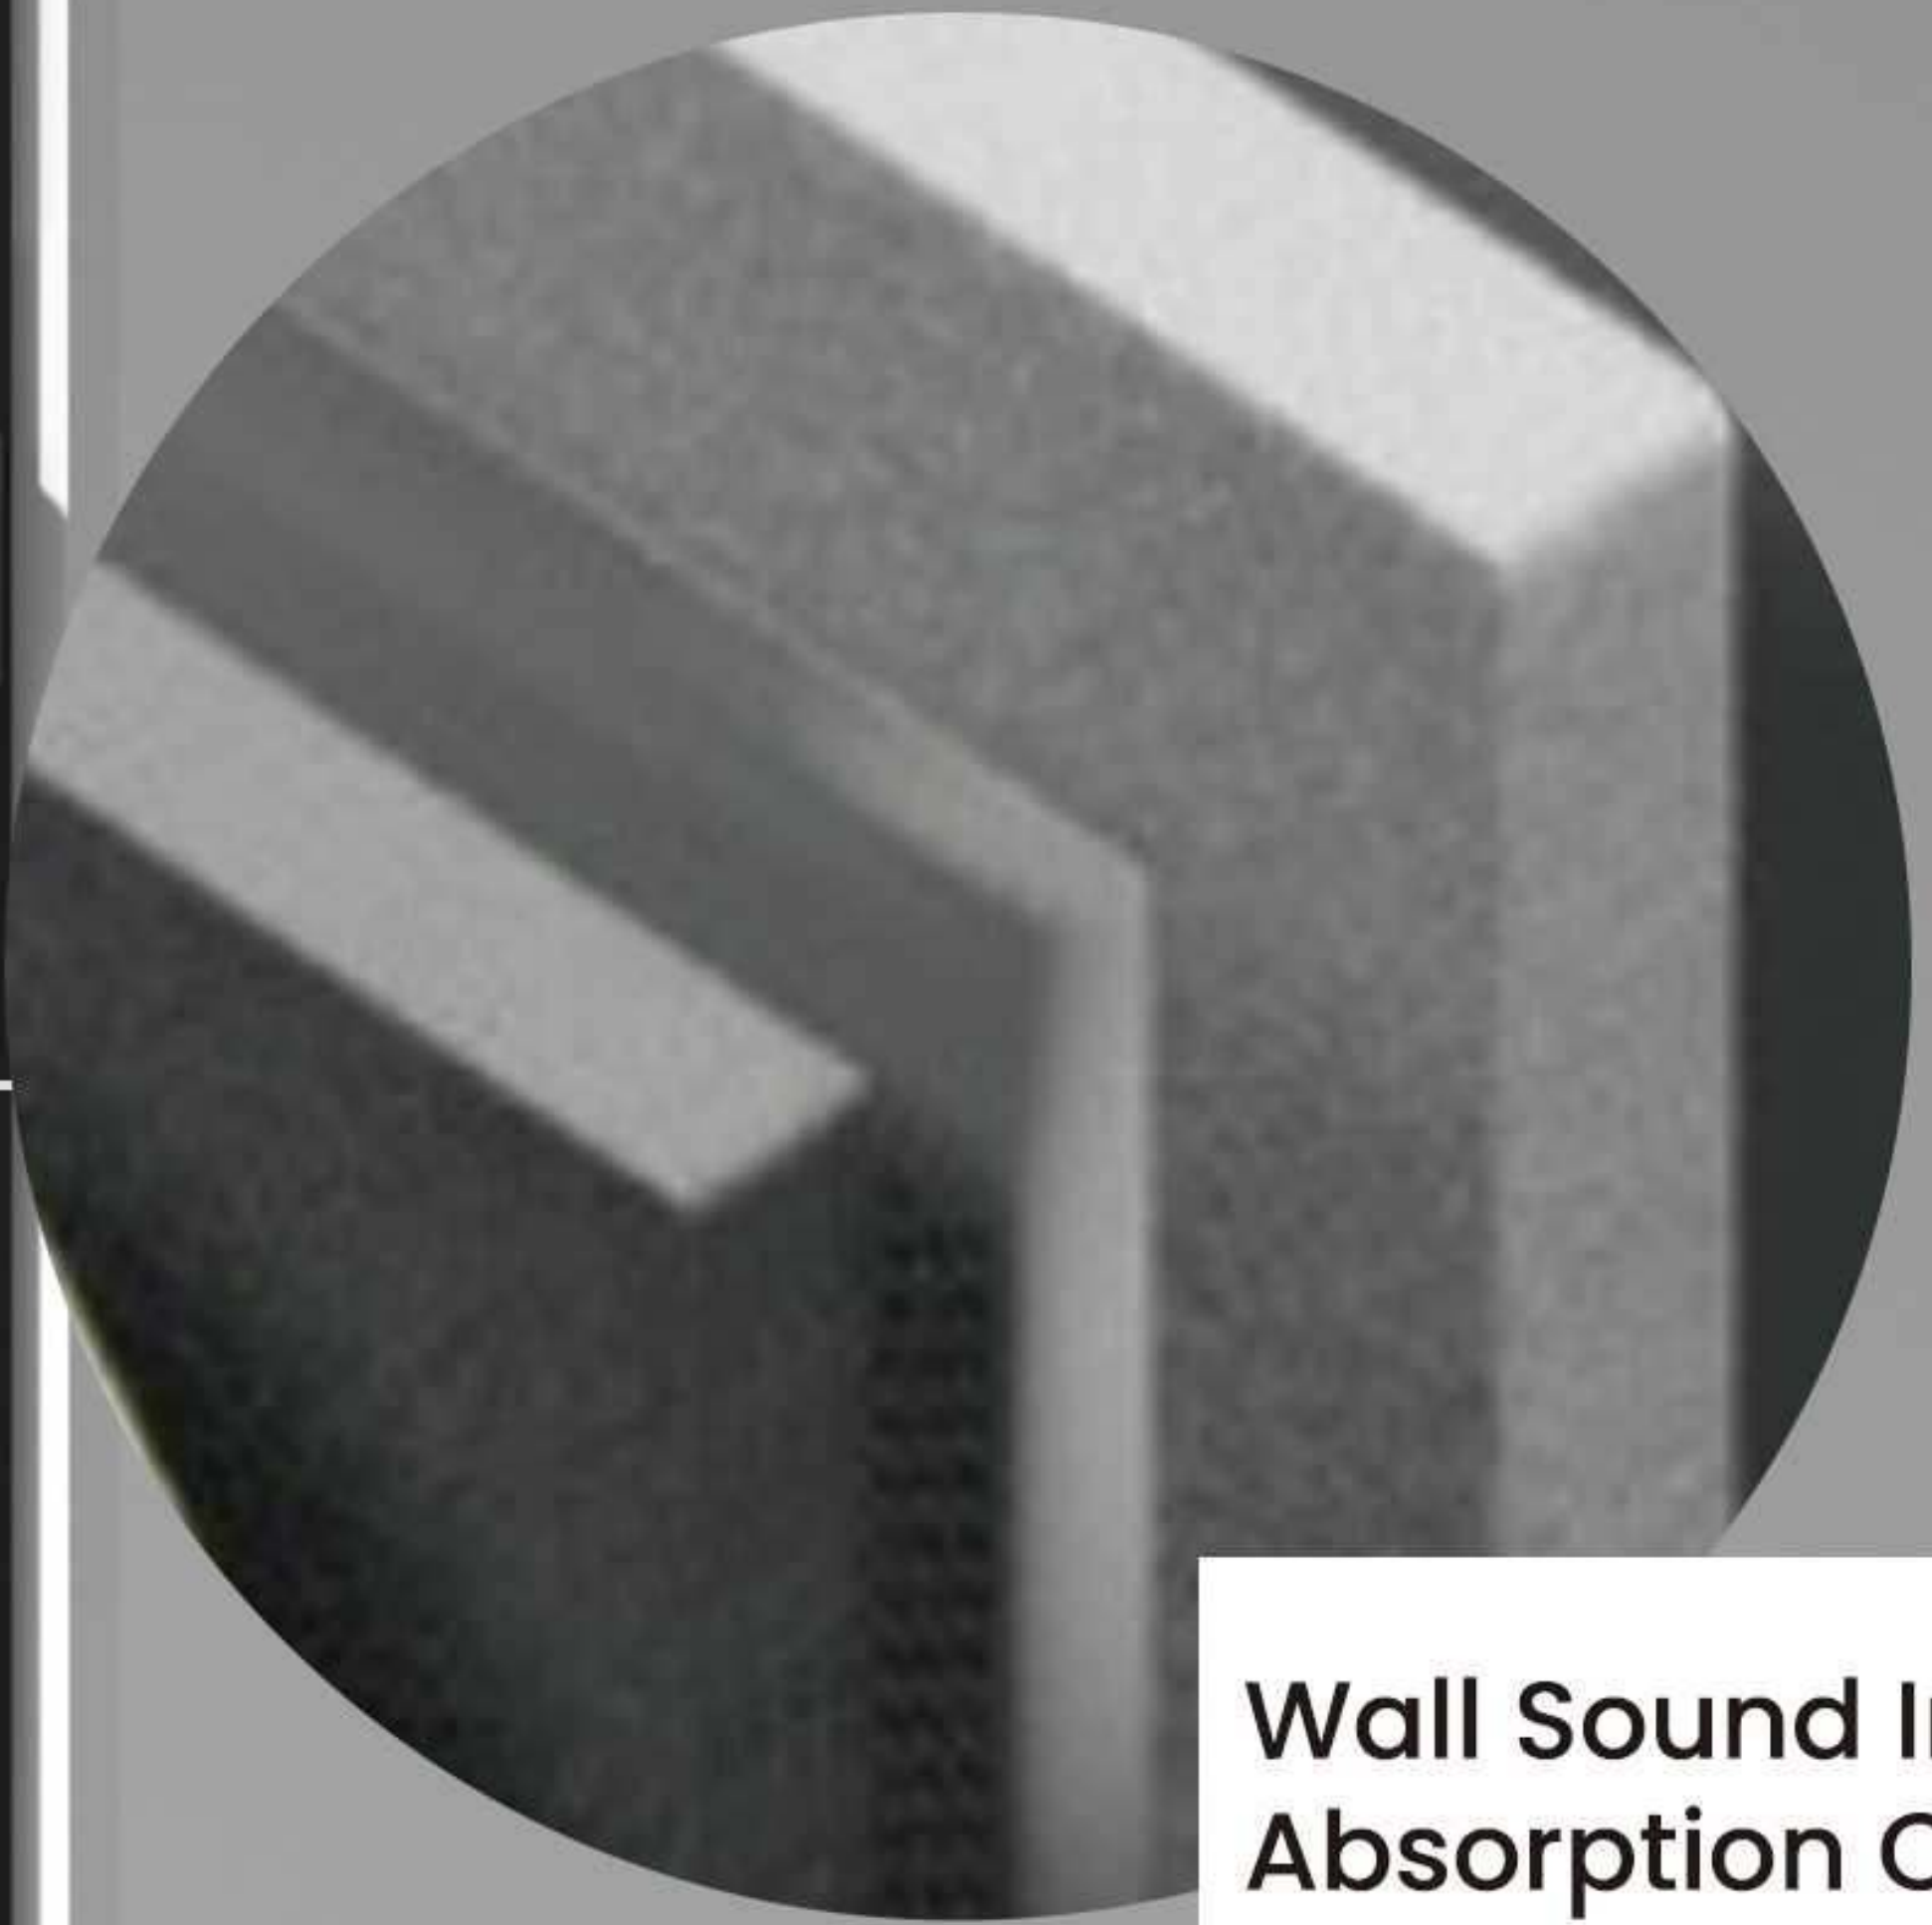

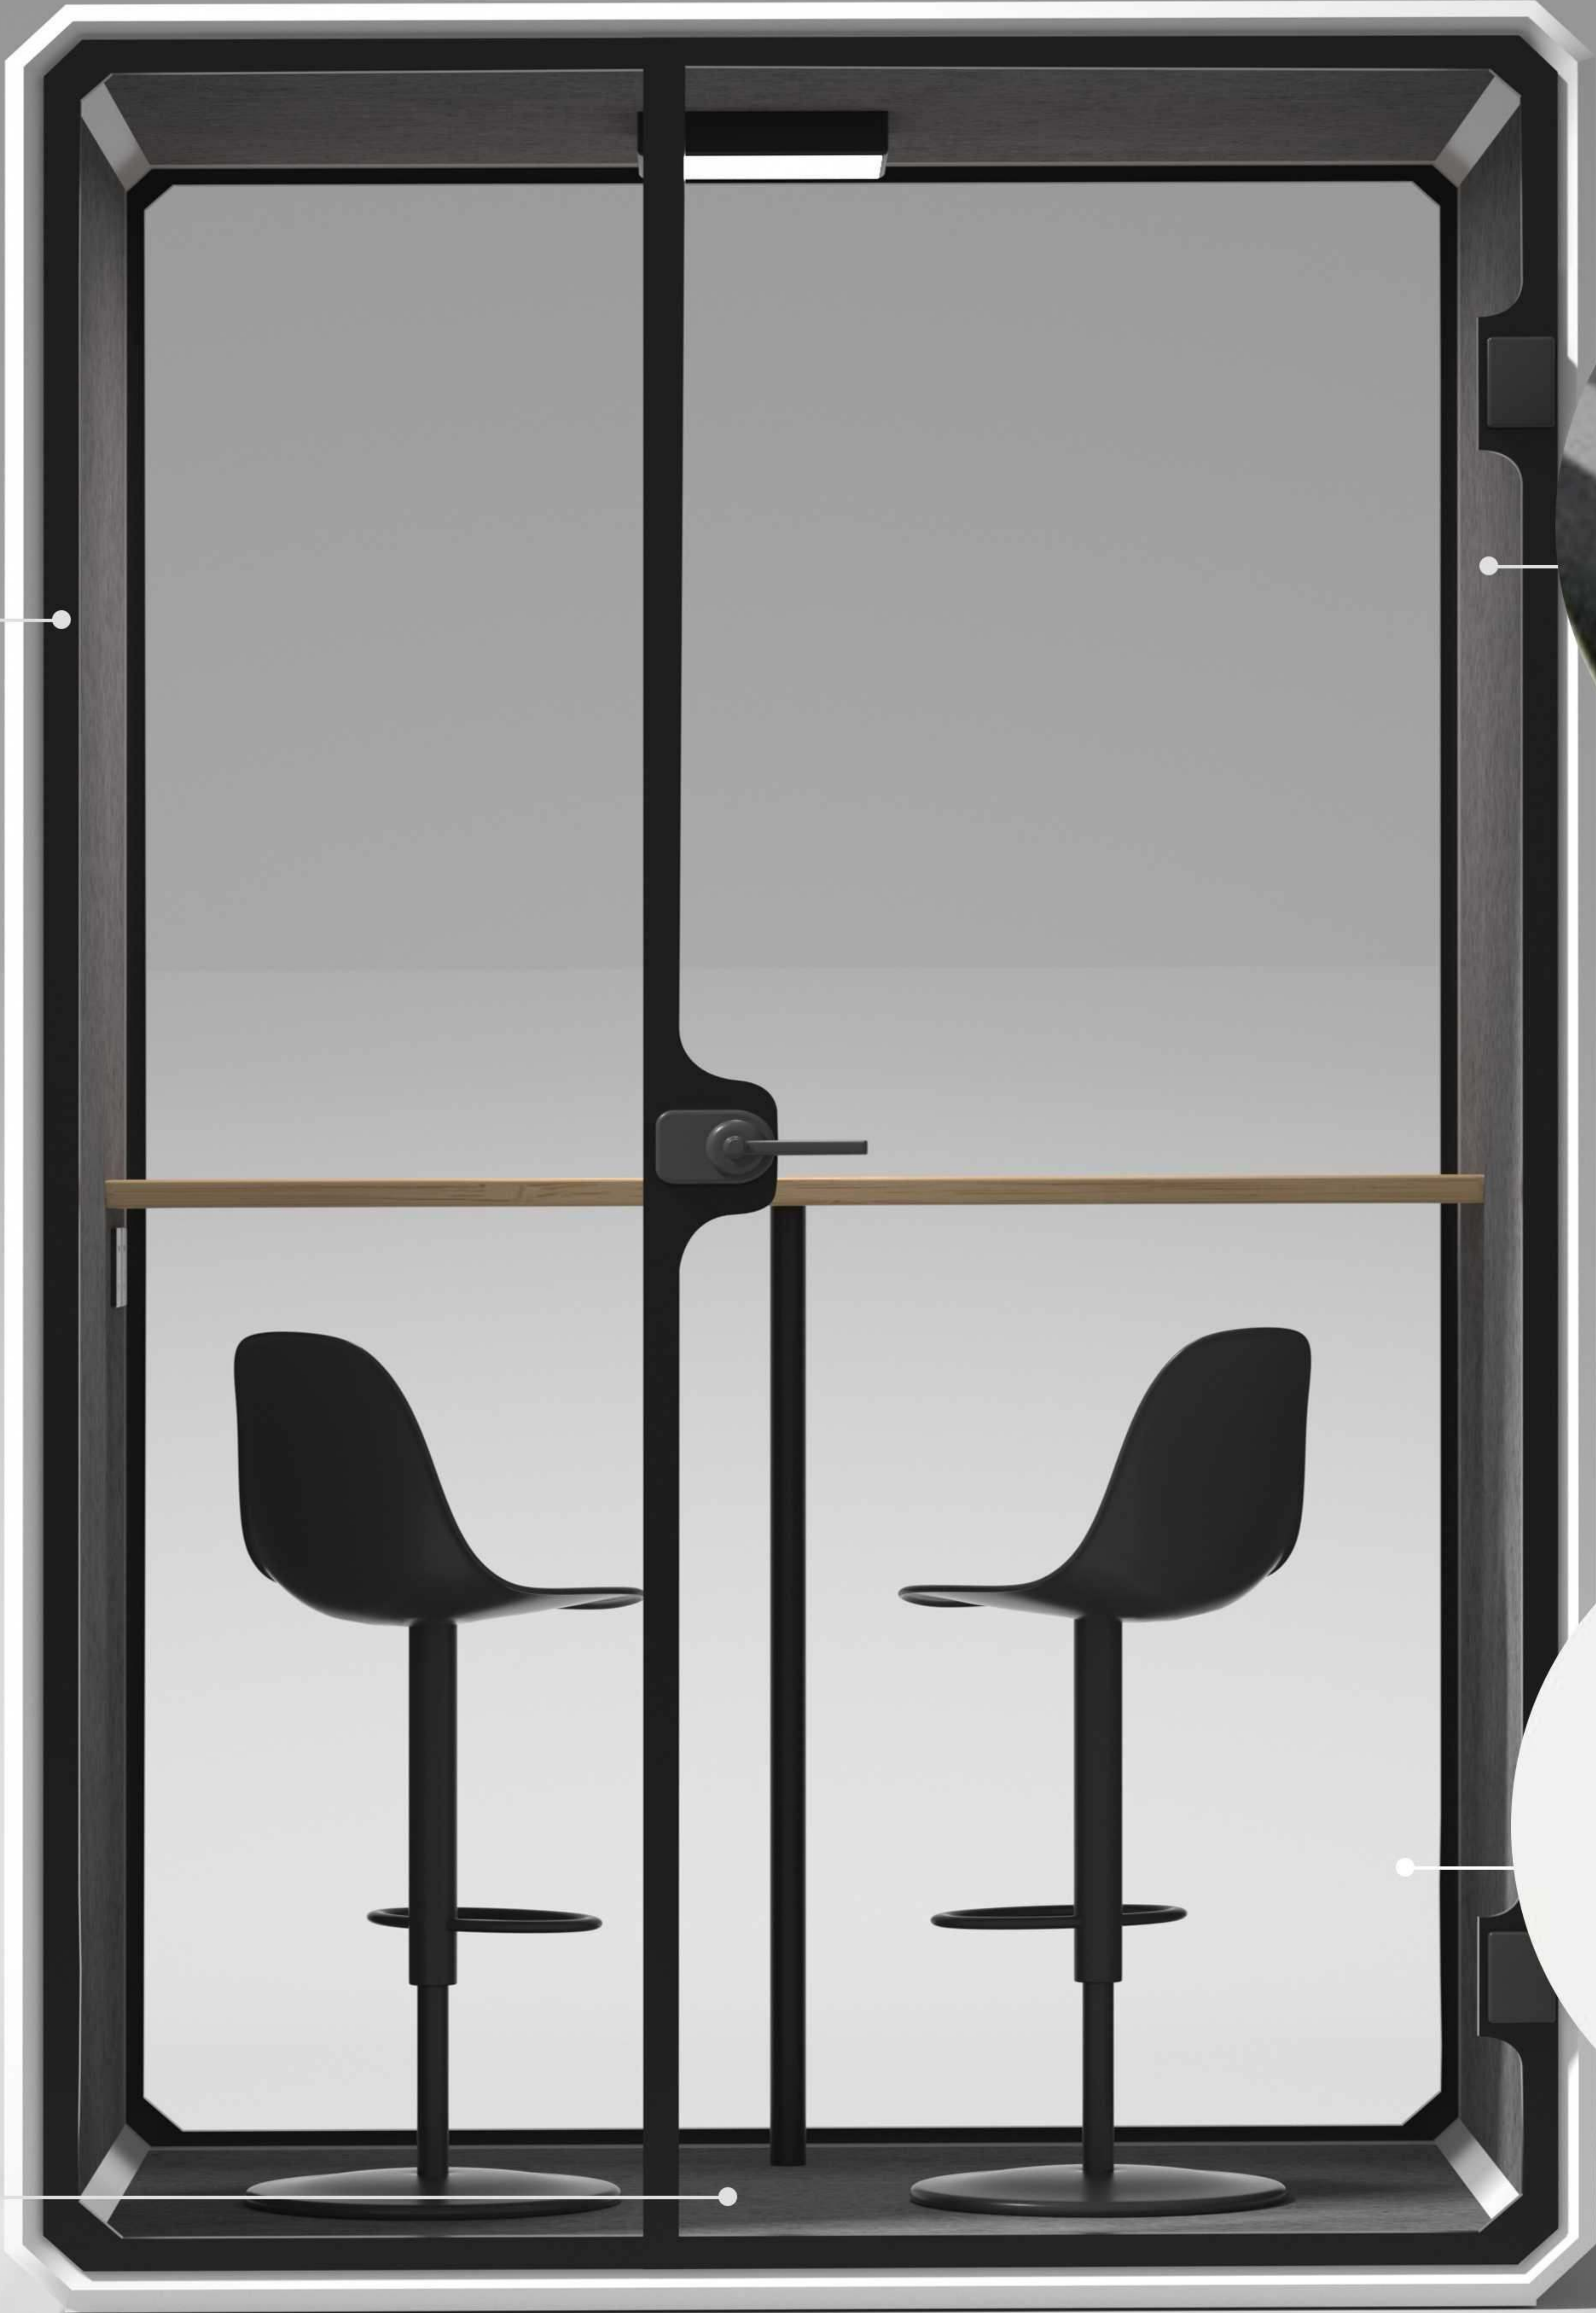

The double sealing of the door frame and cabin edge ensures proper sealing and sound insulation.

02

Sound-Absorbing Carpet

Customized shock-absorbing carpet, fully covering the cabin floor, increasing shock-absorbing effect and enhancing the soundproof function of the cabin.

03

Wall Sound Insulation And
Absorption Combination

Adopting a multi-layer composite sound insulation combination, the shock-absorbing modular wall panel adds high-density damping felt to meet the sound insulation requirements, and the interior is matched with acoustic materials to achieve the acoustic environment indicators.

04

Enhance Transparency

Use laminated glass to better capture sound while maintaining transparency.

Easy To Assemble, Move, And Expand

Born for changing office needs

Within just one hour, a new space will appear in your office with at least 2 people working, and modular design is a quick installation process.

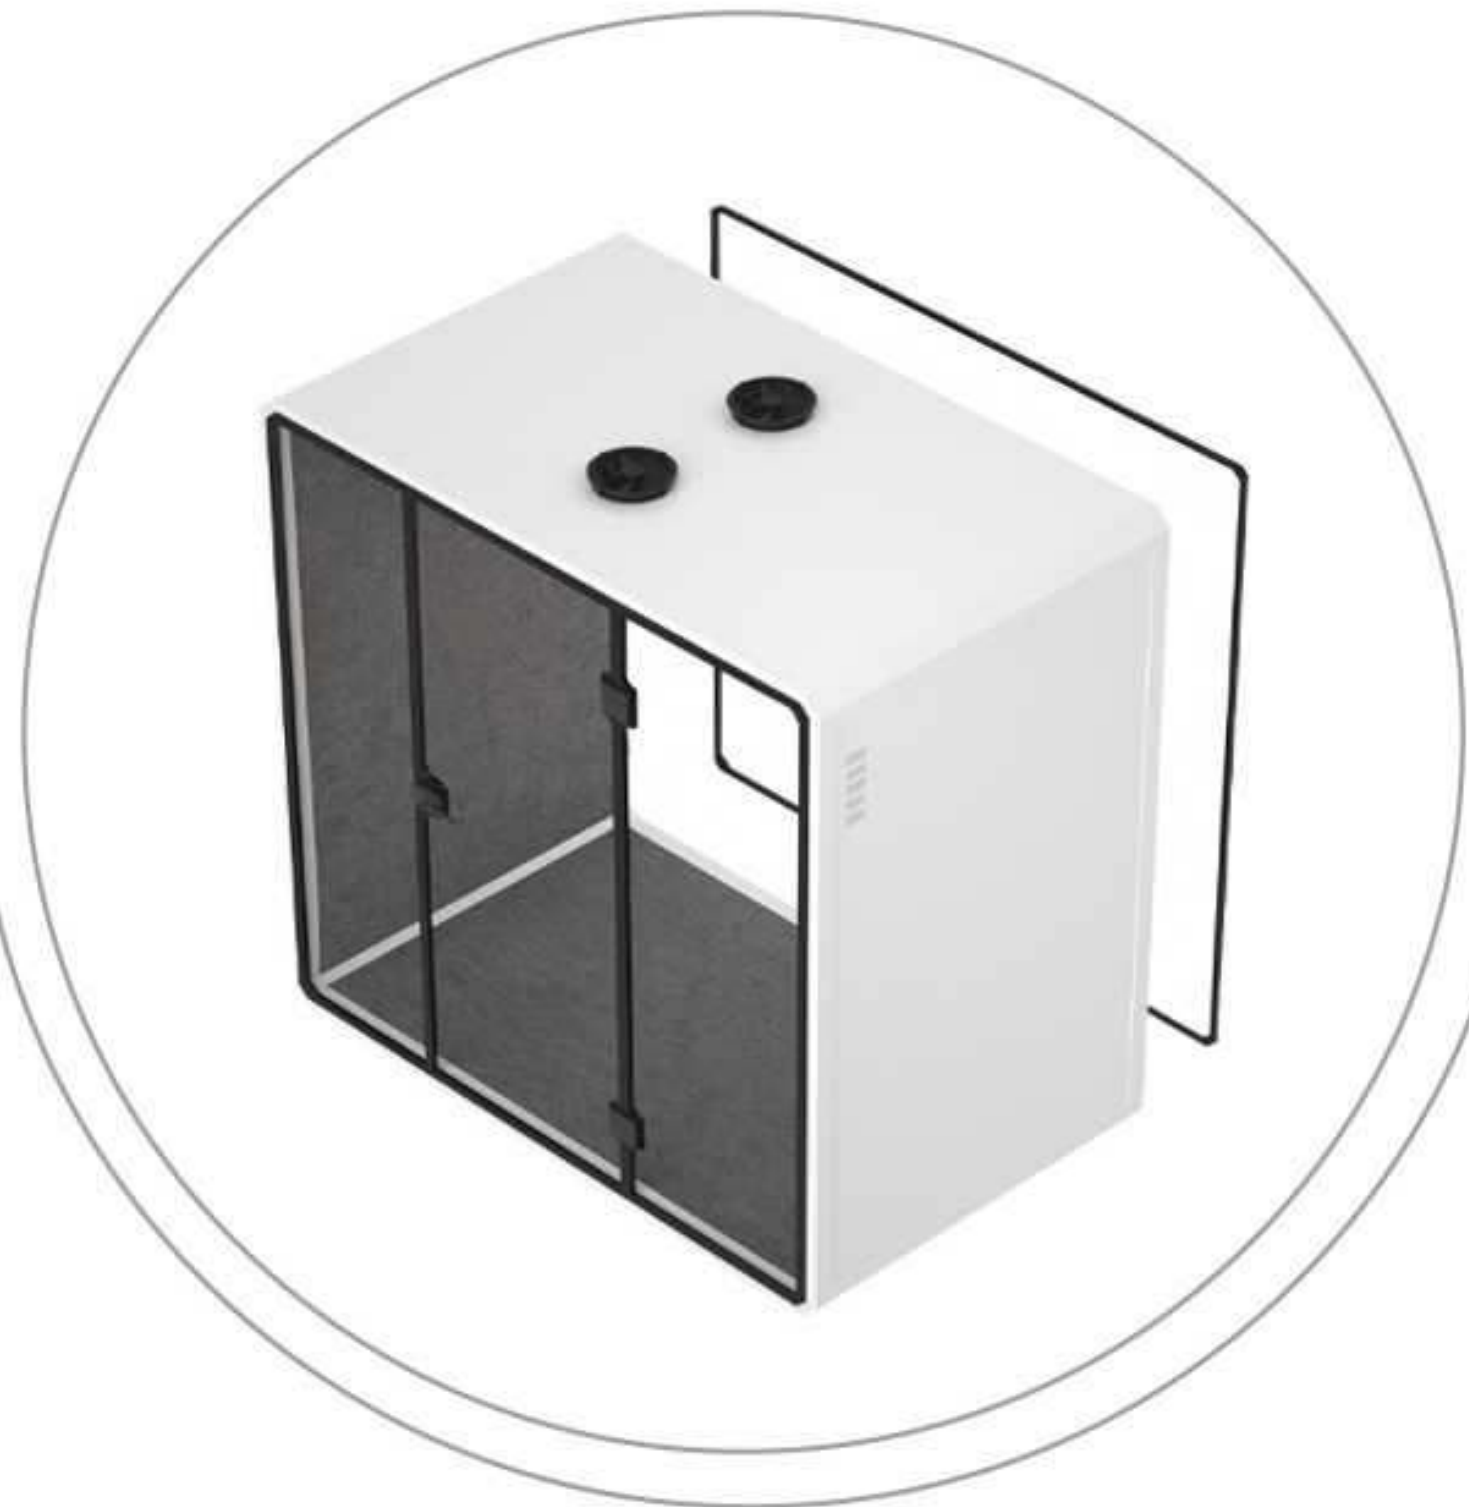

There will be no waste during the installation process, and all packaging materials can be recycled, allowing for immediate use.

Build

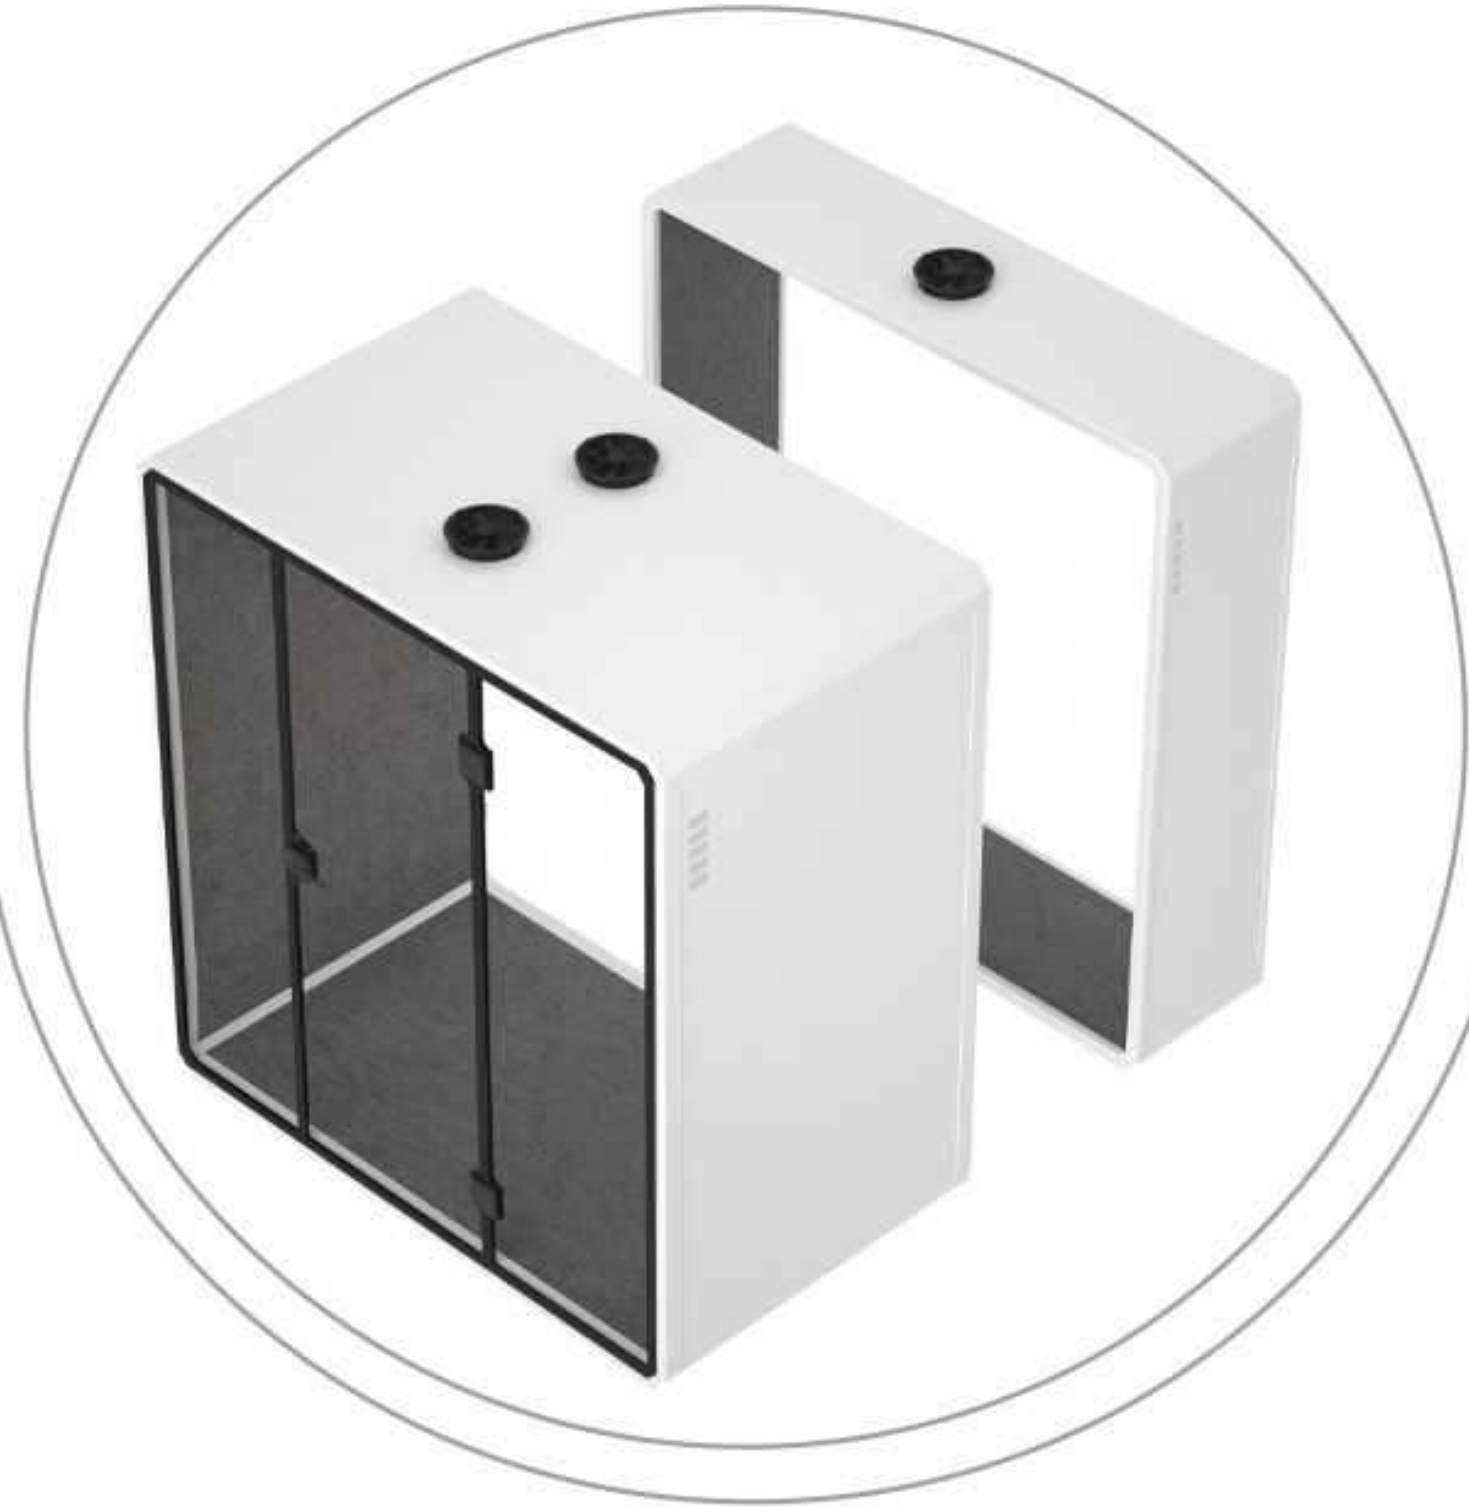

In addition, the silent cabin can be easily expanded to larger sizes to meet the needs of different customers.

Our silent cabin modular assembly method can be customized to meet your space size.

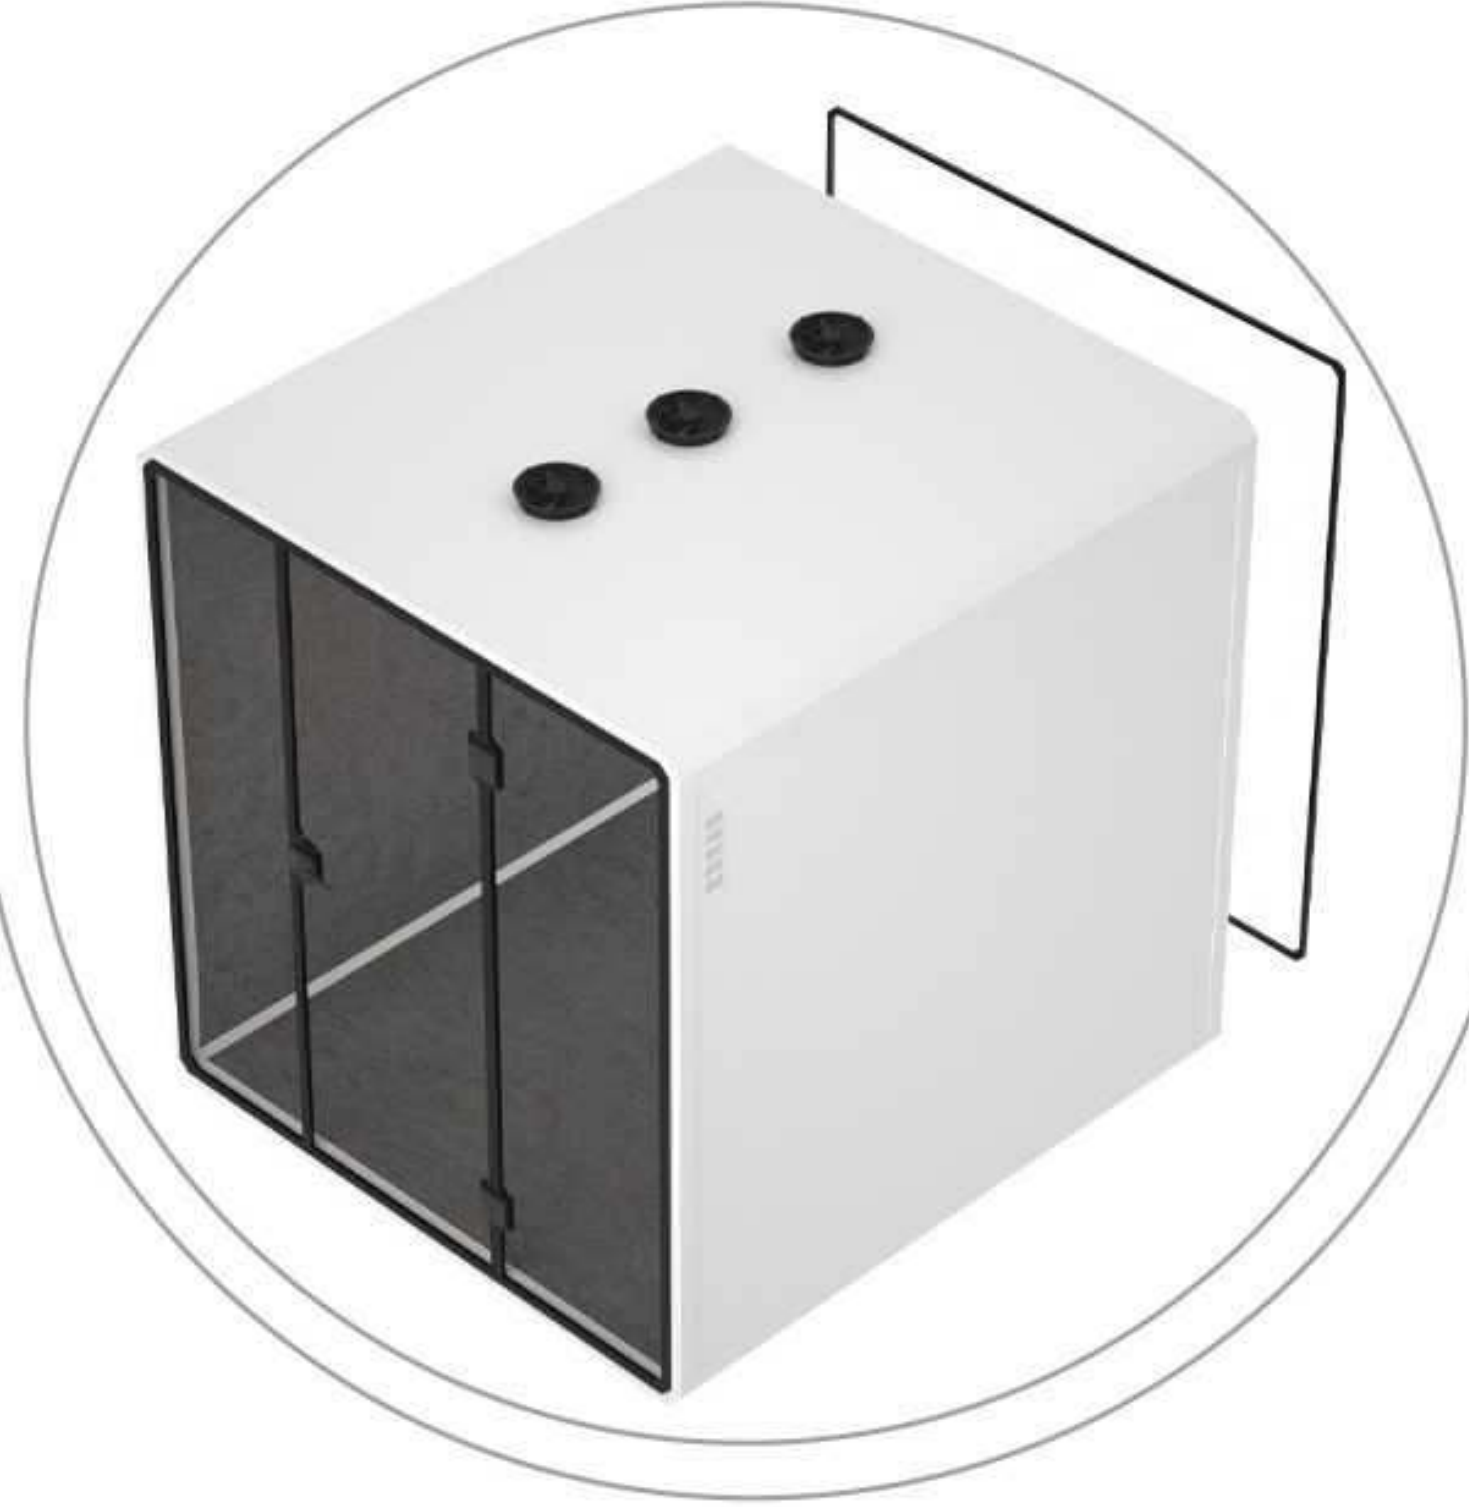

Each silent cabin is a module

01

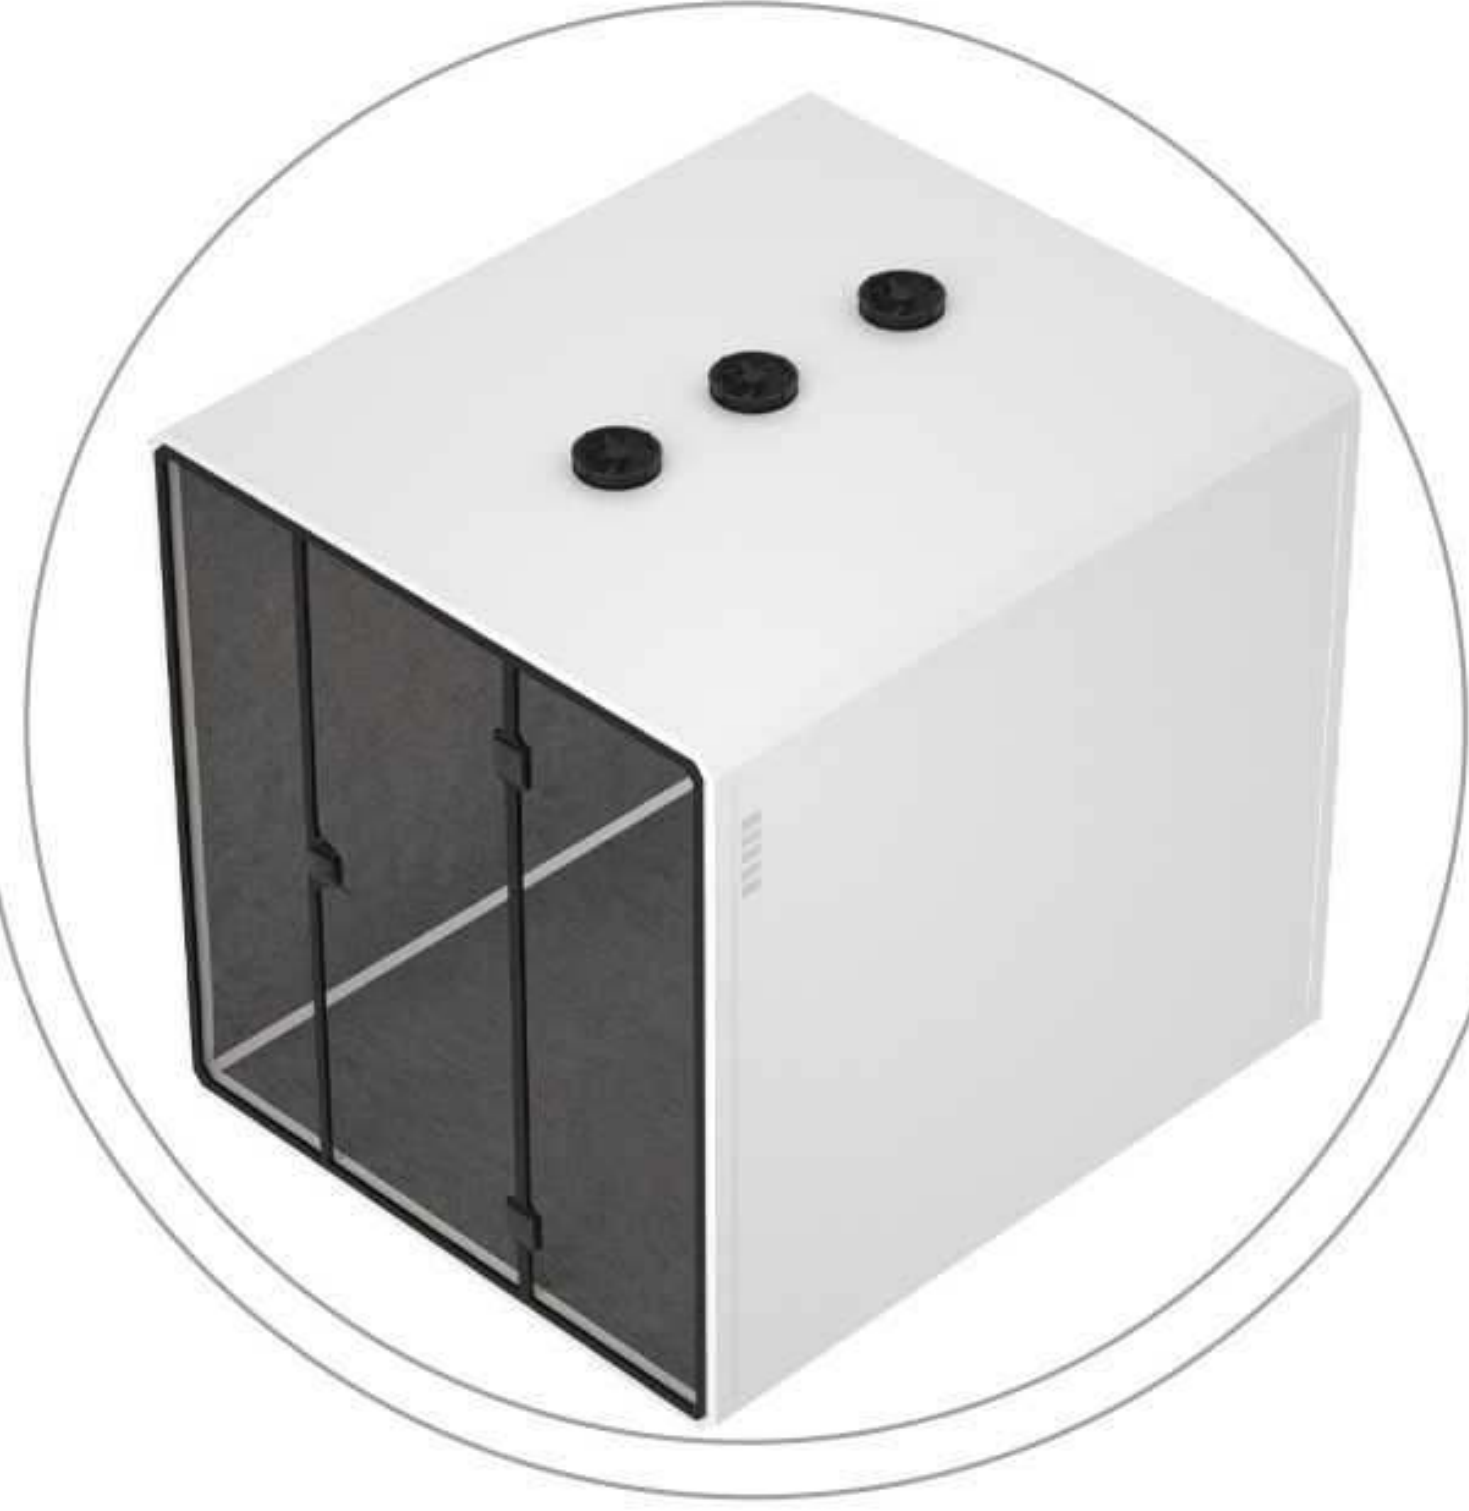

The connection of the wall adopts the male and female groove method

02

Splicing from childhood to adulthood

03

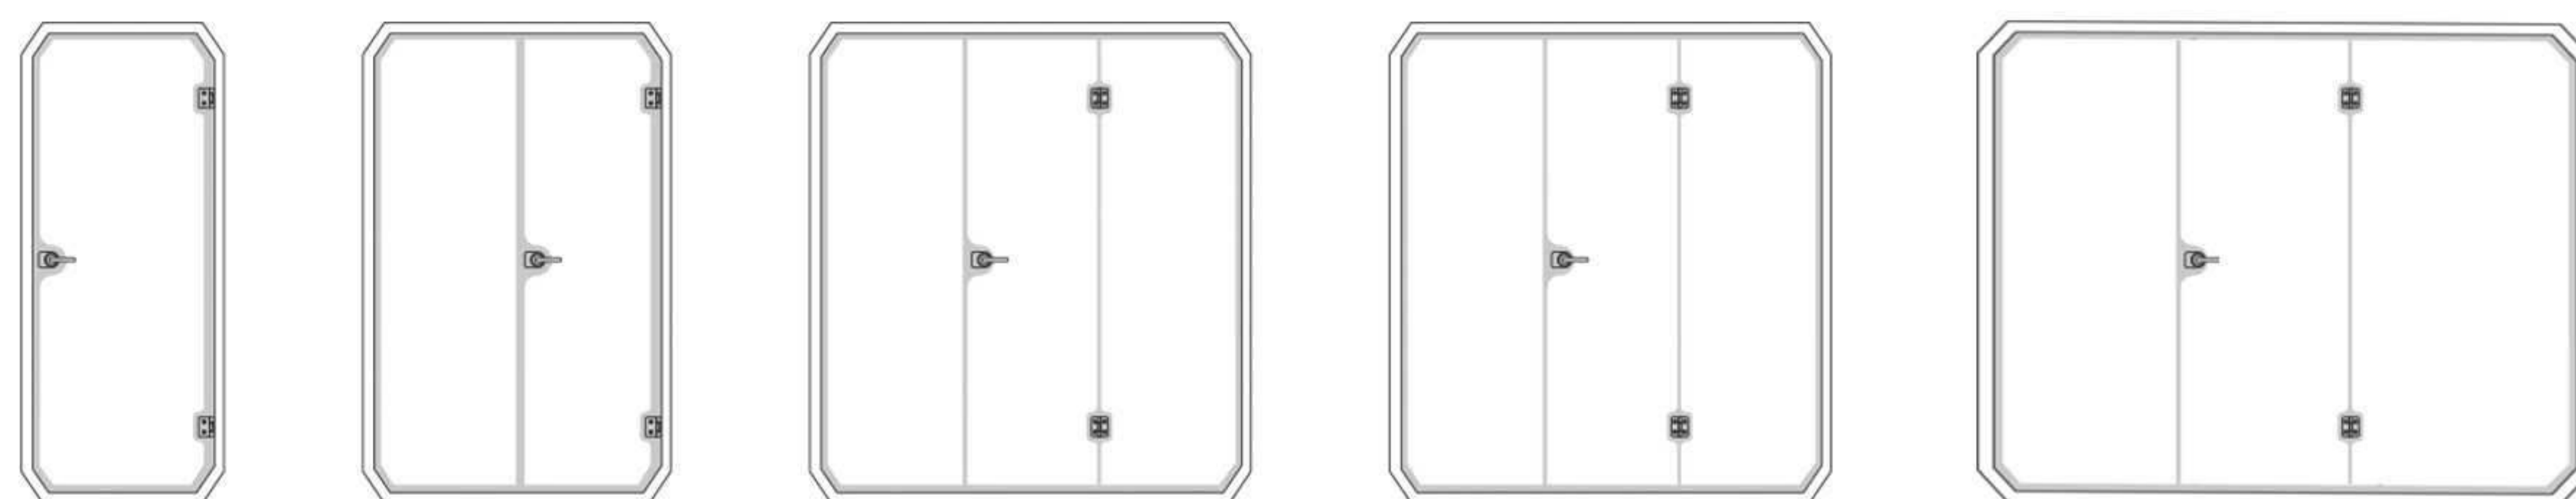

The largest module completed

04

From Small To Spacious Silent Cabins Can Meet Your Needs

Silent Cabin Specifications

We understand that every workspace is unique, so we offer a wide variety of models in different sizes to meet a wide range of needs. At the same time, we also provide customized services to create exclusive soundproof cabins according to customers' specific needs

Completely meets your needs. Whether you need a separate compartment for focused work or a collaborative space for team discussions, we can provide you with the perfect solution.

15

Model S

Your personal space in the office

Model S, A multifunctional and compact workspace solution that is perfect for single person work, phone calls, and meditation.

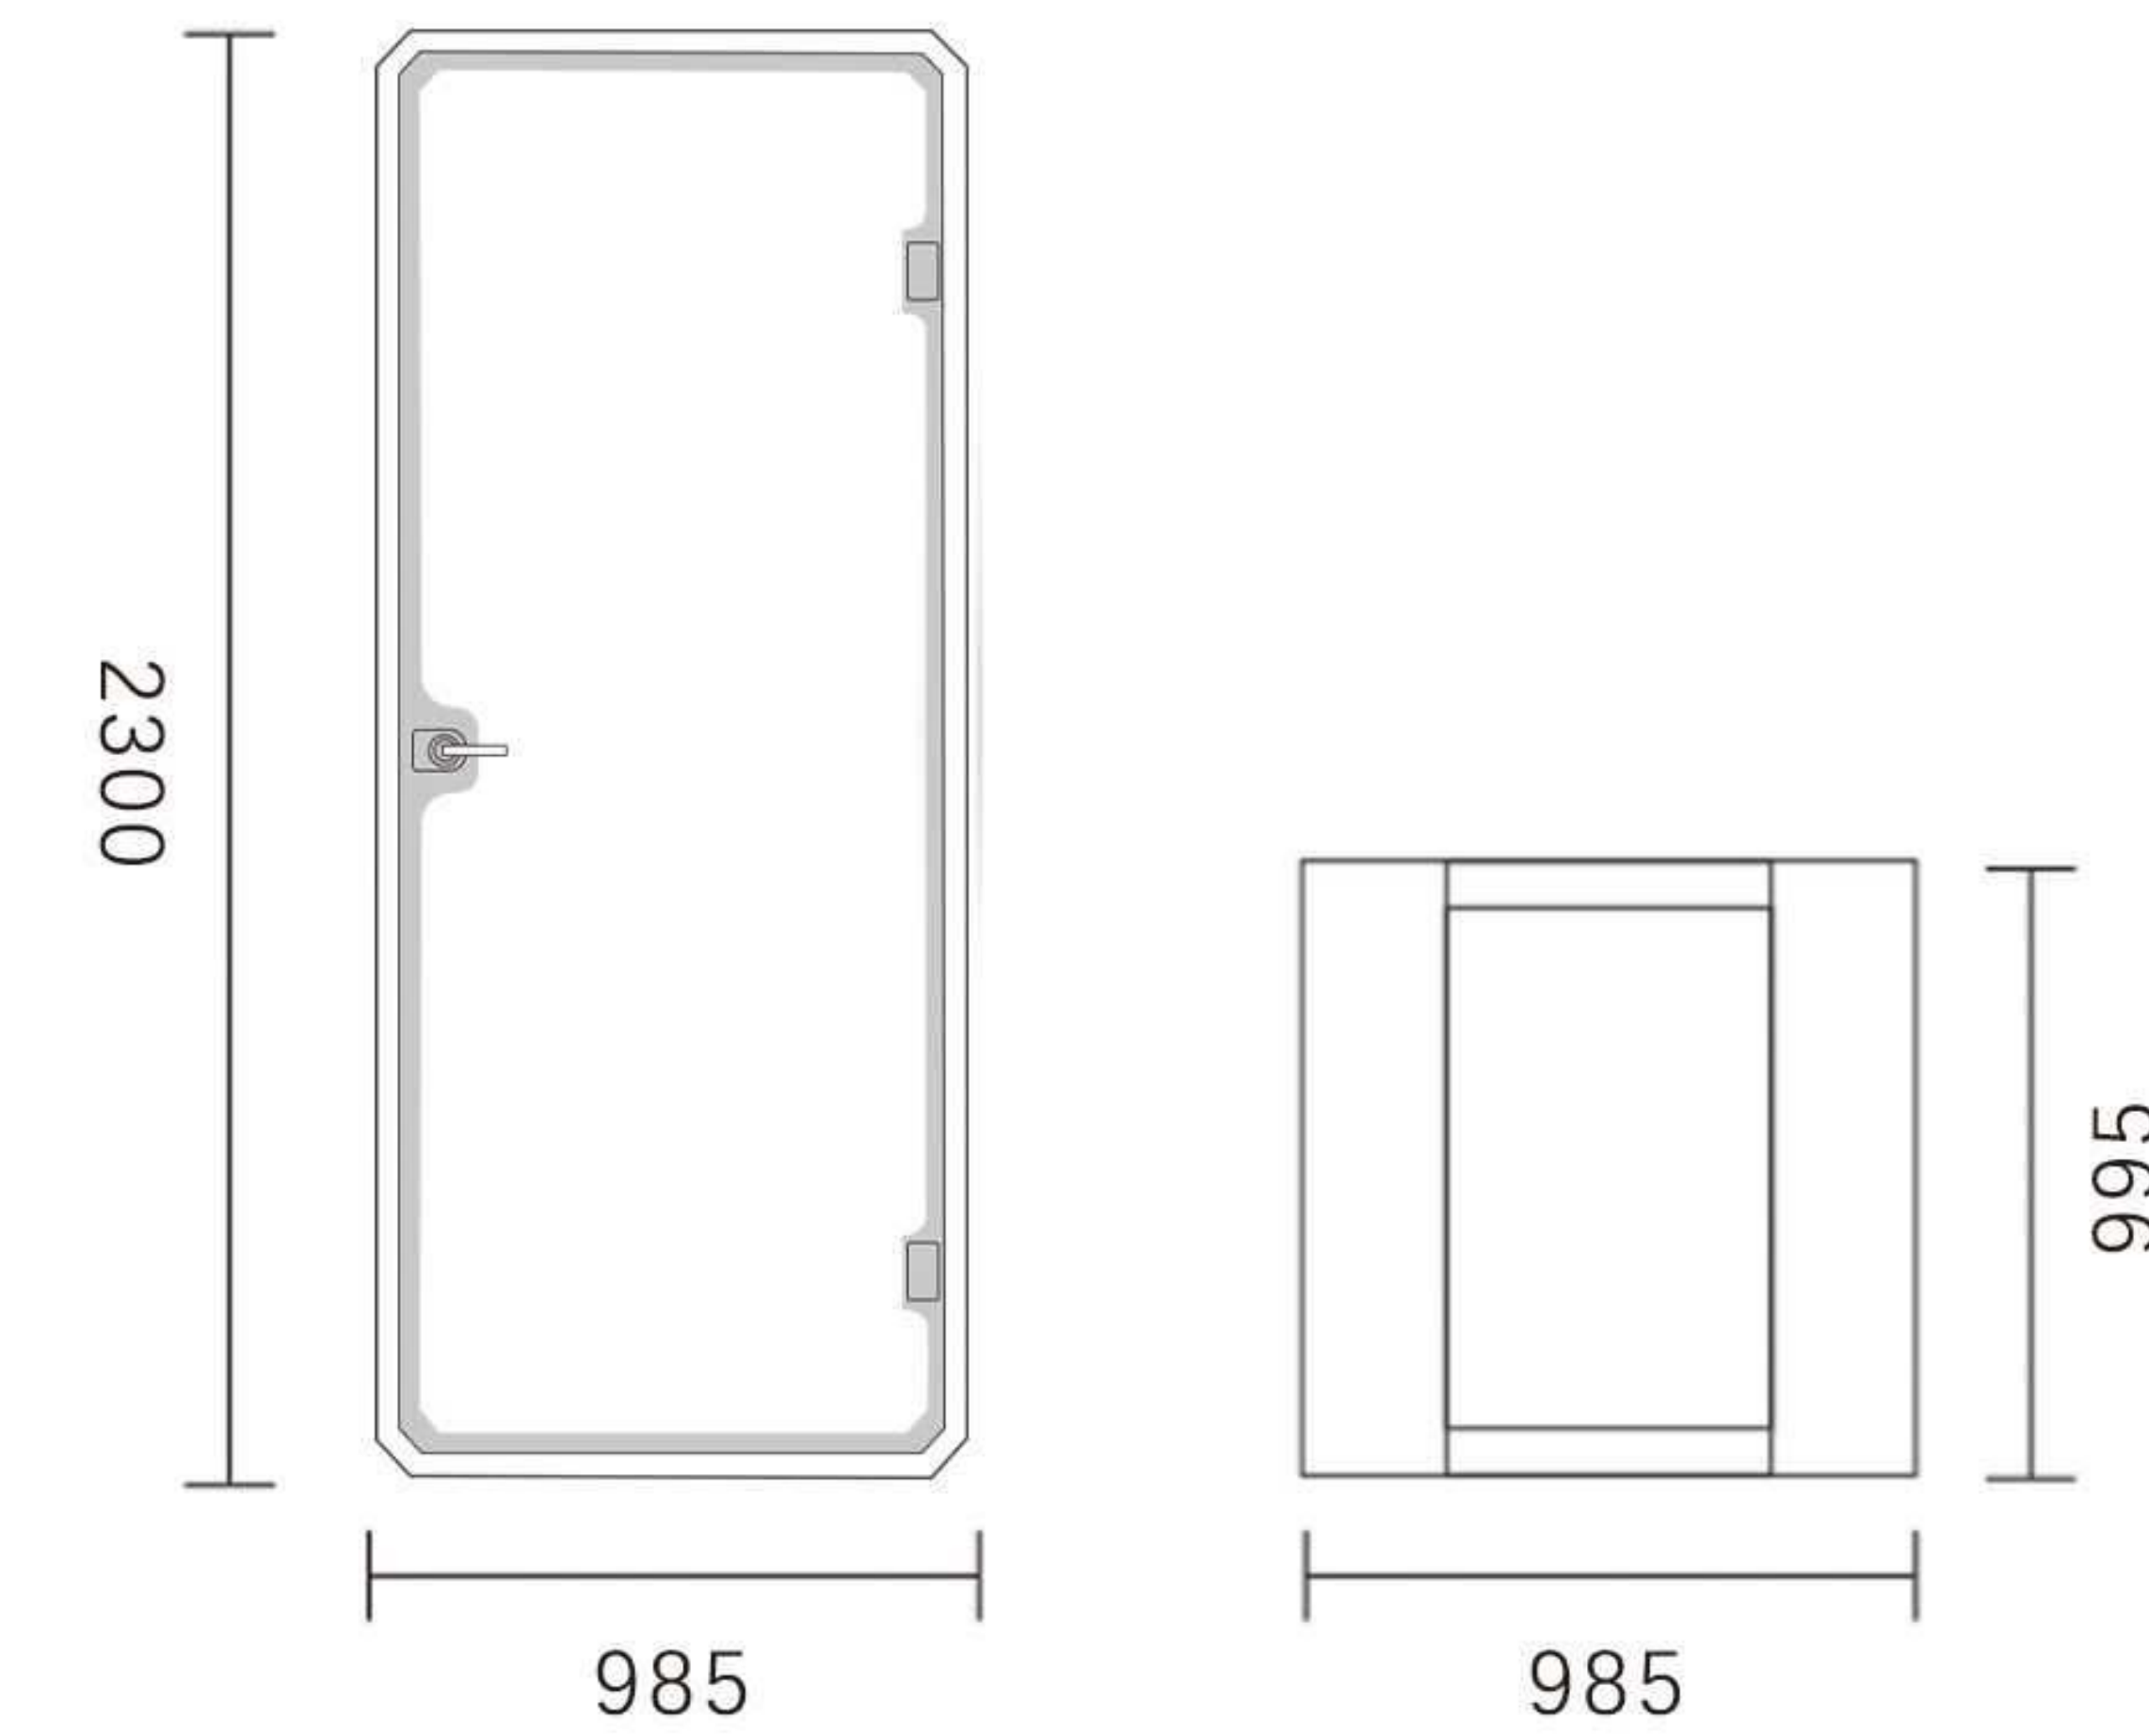

It can be easily placed anywhere in the office, providing a private and quiet space for focused work or confidential conversations.
